With respect to independent claim 5, the prior art either alone or in combination fails to disclose, teach or suggest a noise-resistant circuit for squibbing a squib; said circuit comprising: a plurality of independent channels connecting the controller and a plurality of drivers to transmit the command from the controller to the plurality of drivers, the plurality of independent channels comprising a first channel and a second channel, the first channel being connected to a higher voltage power line of the squib and the second channel being connected to a lower voltage power line of the squib; and a plurality of switching elements, mutually connected in series. These structures in combination with other structures as recited in claim 5 define over prior art of record.

With respect to independent claim 10, the prior art either alone or in combination fails to disclose, teach or suggest an airbag apparatus comprising: a plurality of independent channels connecting the controller and a plurality of drivers to transmit the command from the controller to the plurality of drivers, the plurality of independent channels comprising a first channel and a second channel, the first channel being connected to a higher voltage power line of the squib and the second channel being connected to a lower voltage power line of the squib; and a plurality of switching elements, mutually connected in series. These structures in combination with other structures as recited in claim 10 define over prior art of record.
